EDUCATION

Middle East University Amman, Jordan
Bachelor of Science in Computer Science, GPA 3.7/4.0 September 2026

TECHNICAL SKILLS

Programming: Python, SQL (T-SQL), JavaScript, Dart
Data and Machine Learning: Pandas, scikit-learn, CatBoost, Random Forest regression, data cleaning and validation, feature engineering, fuzzy matching
Web and Mobile: React, Vite, Node.js, Express, Flutter, REST APIs
Databases and Reporting: Microsoft SQL Server, SSMS, SSRS, SQL Server Agent, MongoDB, Firebase and Cloud Firestore
Testing and Tools: Jest, Supertest, API contract testing, Git, GitHub
Cloud: Microsoft Azure fundamentals, AWS AI concepts

EXPERIENCE

ProTech Amman, Jordan
Database and Backend Development Intern March – June 2026

- Designed a normalized SQL Server schema from a narrative school-management scenario, using composite keys, CHECK and UNIQUE constraints, and bridge tables across students, teachers, classes, courses, and grades; populated it with synthetic data.
- Developed 11 stored procedures with parameter validation, TRY/CATCH error handling, and transaction control, plus 6 triggers enforcing class capacity, grade-level rules, and grade auditing.
- Built 5 reporting views and reusable functions, including DENSE_RANK honor-list logic that correctly handles tied students.
- Produced 7 parameterized SSRS reports and XML and JSON import-export workflows with staging and validation.
- Automated log cleanup, index rebuilding, and statistics updates through SQL Server Agent; completed the project independently over 100 training hours under recurring senior-engineer review.

TECHNICAL PROJECTS

Xenon Tourism Platform, *Frontend and AI Integration Developer* Graduation project, team of 3

- Built every React web page for vendor onboarding, packages, bookings, payments, reviews, analytics, and administration.
- Integrated REST endpoints with authentication-token handling, form validation, protected routing, and session recovery; contributed to AI recommendation logic.
- Led testing of API contracts, authentication, security logic, and interface resilience with custom and adapted scripts.

Spotter AI Freight Rate Prediction, *Machine Learning Assessment* Python, CatBoost, scikit-learn

- Built a regression pipeline on 48,000 shipments to predict price from weight, distance, equipment type, and market index; removed 292 invalid records and selected CatBoost for native categorical handling.
- Achieved $119.85 validation mean absolute error; generated 12,000 ID-aligned predictions, validated completeness, and documented underprediction on high-priced shipments.
- Trained a separate model for December inputs lacking a market index and explained why identical inputs produced a flat 31-day forecast chart.

Salary Prediction from Survey Data Python, Pandas, scikit-learn

- Cleaned 28,090 survey responses, reduced 14,000+ job-title variations with keyword rules and fuzzy matching, and converted compensation to USD; retained 23,693 records after IQR and Z-score outlier analysis.
- Trained a Random Forest regressor reaching approximately 0.47 test R-squared and documented its limitations.

Flutter E-commerce Prototype Flutter, Dart, Firebase

- Designed the interface and implemented about half of the pages (profiles, delivery addresses, order status) with real-time Firestore updates.

Tic-Tac-Toe Desktop Application Python, Tkinter, Pandas

- Built an object-oriented game with two-player and computer modes, win and draw logic, a session scoreboard, and Pandas match-result tables.

CERTIFICATIONS AND LANGUAGES

Certifications: AWS Certified AI Practitioner; Microsoft Certified: Azure Fundamentals (AZ-900)
Languages: Arabic (native); English (C1 proficiency, TOEFL iBT score 5 out of 6)
